#### 5 Sensor Array

Only LeakSecure has this sensor, providing reliable data for hardness and consumption safety

- ✓ Quad-Path Ultrasonic Flow Sensor
- ✓ Water Pressure
- ✓ Ambient Air Temperature
- ✓ Humidity Levels
- ✓ Water Quality (TDS)

#### WiFi and Bluetooth Enabled

The valve can be closed from anywhere with automatic + remote water shut - and the LeakSecure™ app.

#### Simple Installation Process

Vertical or horizontal mounting fits a range of water lines for compatibility in any home.

#### Superior Materials

Professional grade components with stainless steel ball valve

#### Shutoff Parameters

Take control of the variables that trigger shutoff. Create exceptions unique to your home and avoid false positives.

#### Take control of your own water ecosystem

Crystal-clear snapshot of water flow, temperature, pressure, and quality for a flawless user experience. "Close valve" button at your fingertips for instant remote water shutoff. LeakSecure identifies even the smallest potential leaks when performing its routinely scheduled "LeakTest".

- ✓ Real-Time Notifications
- ✓ Real-Time Water Quality (TDS) Data
- ✓ Leak Test
- ✓ Detailed Historic Water Usage Data

## FREQUENTLY ASKED QUESTIONS

### Do I need leak detection with automatic + remote shutoff?

Water damage is the number one problem in homes, more than fire and theft combined. According to the EPA, 10% of U.S. households have water leakages and damage could have been prevented in 93% of cases. Having a product that detects a leak is helpful, but depending on the device, you may not have the ability to stop the leak. With our intuitive leak detection system with automatic+remote shutoff you can help protect your home from catastrophic water damage right from the app. You'll get immediate notification at the first sign of a leak and you can shut off the water from your phone with one click. And because water damage is a top driver of home insurance claims, some providers give discounts to homeowners that install a leak detection system that has water shutoff capabilities like LeakSecure™.

### How do I detect a water leak through the LeakTest?

Through the LeakTest function on the app, LeakSecure™ performs a comprehensive health check of your home's water system while you sleep, preventing costly leaks before they happen. The intuitive machine learning tracks your home's typical water usage patterns resulting in more accurate leak detection. If the app detects an abnormal flow rate, you have the ability to automatically shut off the water from the palm of your hand, no matter where you are.

### How do I scan for water leaks?

You don't. LeakSecure™ does all of that for you and notifies you in real time through the app so that you can take action appropriately (depending on the severity of the alert), such as disregarding the notification entirely or autonomously shutting off the water to your entire home.

### Does this device turn the water off automatically if there is a leak?

Our proprietary quad-path ultrasonic sensor provides accurate monitoring of the entire home's plumbing. In addition, LeakSecure™ also monitors water pressure, water temperature, ambient temperature, humidity levels, and water quality (TDS). Over time, LeakSecure™ learns your water usage patterns to more accurately identify unusual events and can take action autonomously during a critical event by closing the valve, shutting off water to the entire home. You'll find a user-friendly interface that enables remote one-click water shutoff, helps your family conserve, and interacts seamlessly with Alexa, Google Assistant, Apple HomeKit, and Control4.

### How big of an undertaking is installing a device like this?

Adding the LeakSecure™ device to your home is a simple, straightforward installation when done by a licensed plumbing professional.

### Can I install the LeakSecure™ water leak detection system device myself?

The LeakSecure™ water leak detection system device requires professional installation for warranty purposes. Find an installer in the locator by entering your zip code. If we have no preferred partners in your area, any licensed plumber can install LeakSecure™ or you can even call us to help facilitate an install!

### Can I get my own plumber to install the device?

Yes, you can have your own plumber (licensed of course) install the LeakSecure™ water leak detection system device. The box comes with easy-to-follow instructions.

### Can I use this product if I have a well?

Yes! The LeakSecure™ water leak detection system device can be installed in homes that have well water.

### Where does this product get installed?

The LeakSecure™ water leak detection system device is installed on the main water line, and the vertical or horizontal mounting fits a range of water lines for compatibility in any home.

### What type of alerts can I receive and are they adjustable?

The LeakSecure™ app has fully customizable alerts that keep you one step ahead of water leaks, including major and minor leak alerts, leak detection alerts, automatic and remote water shut-off alerts, at-home and away leak detection modes, freeze warning notifications with customizable actions, and notifications for high and low inline water pressure, humidity and temperature.

### Is this app compatible with both iOS and Android?

The LeakSecure™ water leak detection system device app is compatible with both iOS and Android.
